**EXHAUST ORDER FORM**

TWE exhaust systems use stock start/end points, and use slip joints instead of flanges (this is to allow for expansion and contraction of each piece). Please fill out the following information so we can attach the proper flange to your TWE piece, or we can provide you with the proper flange to add to your existing aftermarket system. In the second instance, these flanges must be welded on at muffler service center or yourself, due to the varying tolerances between manufacturers.

**\*\*\*Only systems that terminate in the stock locations can be used with our systems.**
